## (54) SERVICE PROPOSITION SYSTEM, FILTERING DEVICE AND SETTLEMENT PROCESSOR

### (57)Abstract:

**PROBLEM TO BE SOLVED:** To enable efficient utilization of service by a user of the service.

**SOLUTION:** The service to be offered by a service company 30 is stored and information to indicate service related to the service is stored as service related information in a data base part 17. When a certain kind of service is selected by using a service utilization terminal 20 by the user, the service related to the selected service is retrieved from the service related information and suggested to the user by a related service retrieving part 14. A fact that usable service related to the previously selected service is available is learned on a screen of the service utilization terminal 20 by the user. When the service to be utilized is decided by the user, the service is requested to the service company 30 by a service filtering system(SFS) 10. Data to offer the service is transmitted to the service utilization terminal 20 by responding to the request from the SFS 10 by the service company 30.
